

AIR POWER TOOLS

OUR RANGE

Based on similar designs to our Sealey and Premier range, these tools offer impressive reliability with exceptional value for money in every day air power tools. Products are supported by the same professional aftersales service as the rest of the Sealey and Premier ranges.

Our Sealey range is defined by traditional designs and proven workshop reliability. Our mid-range offers the exact same extensive aftersales care as our high-end Premier range.

These tools feature contoured, soft grip handles and housings which help reduce the effects of vibration and chill - major contributors to circulatory and nerve problems such as white finger. The tools also include exhaust systems designed to reduce noise levels by baffling the noise or directing it away from the operator's environment. The air wrenches are amongst the most powerful machines we have seen in the market.

Our Premier range offers superb performance while still being competitively priced. Premier Air Power Tools are made up of the very highest quality components and manufacturing designs to offer a long and durable working life. As with all of our ranges, Premier Air Power Tools are backed with unrivalled and extensive aftersales care.
